TABLE OF CONTENTS

SECTION I. GENERAL

A. Purpose

The City of Santa Monica is soliciting bids from qualified contractors for construction services for the CityTV Tenant Improvement Project. This project is located at 1654-19th Street in Santa Monica.

B. Project Background

The existing building located at 1654-19th Street in Santa Monica is a CMU block building that was used as an auto repair shop. The building is approximately 4,700 square feet and contains vehicle bays, an office space, an auto parts storage area, a men's and women's restroom, and an attic space for storage. After the tenant improvements have been completed, the City of Santa Monica's government community cable channel, CityTV, will be moving into the building and using it as offices and a television studio.

C. Objectives

The City is seeking bids from contractors to provide construction services for tenant improvements at 1654-19th Street in Santa Monica. The contractor is responsible for the project meeting all federal, state and local agency regulations.

The construction contract duration is two hundred ten (210) calendar days, and the anticipated Notice to Proceed date is January 2011.

Note that this project is subject to prevailing wage rates, and the contractor is required to have ***a Class A (General Engineering Contractor) or Class B (General Building Contractor) license*** at the time of bid submission. This project may also be subject to the City of Santa Monica's Living Wage Ordinance and this form must be signed and submitted with the bid. The Oaks Initiative Disclosure Form and the State of Arizona Disclosure Form (Exhibit "F") must also be signed and submitted with the bid.

The contractor will be required to implement construction techniques for the project which increase life-cycle economic return, increase durability and longevity of building materials and systems, maximize construction worker and patron health and productivity, minimize resource use (including energy, water and materials), minimize waste, minimize site and neighborhood disruption, minimize pollution, and model the applicability of sustainable design and construction techniques. For further information on the City of Santa Monica's guidelines on sustainability, please visit the City's Internet site established at http://greenbuildings.santa-monica.org.

SECTION II. SCOPE OF SERVICES

For the scope of work, refer to the attached General Requirements and Exhibits "G" and "H" for the project drawings and specifications. The Work includes the construction of offices, an attic space and a television studio space. The scope of work includes, but is not limited to, demolition, structural upgrades to the building, new restrooms and a kitchen, a new mezzanine, a new building HVAC system, new fire sprinklers, phone and data network, cable television, audio visual system, electrical upgrades and installation of a storm drain system.

The contractor will be responsible for coordinating work with the utility companies for the new utility connections to the building.

All demolished material shall be removed and disposed by the contractor. The contractor must also submit a Construction Waste Management Plan and pay a performance security deposit (3% of the project valuation to a maximum deposit amount of $30,000) as required per the City of Santa Monica's Construction and Demolition Ordinance (Ordinance 895 CCS), refer to the attached General Requirements specification section 01560.

Hours of construction are to be Monday thru Friday 7:00 am to 6:00 pm, Saturday 9:00 am to 5:00 pm.

There is limited street parking and parking on site at 1654-19th Street. If the contractor needs parking permits, the contractor is responsible for coordinating with the City's Transportation Management and Parking Office to obtain street parking permits. The contractor is responsible for any fees associated with parking vehicles and other construction equipment on the street.

SECTION III. BID REQUIREMENTS

The City has established requirements for bids in compliance with the Sustainable City Program to promote waste reduction and resource conservation. Submittals should not contain plastic bindings, plastic pages, or laminated pages. Double-sided bids are preferred. Copies should be printed on recycled and/or tree-free paper. Please avoid superfluous use of paper (such as separate title sheets or chapter dividers and unnecessary attachments or documents not specifically requested).

For consideration, please submit three (3) copies of the bid containing the following elements:

A. Client reference list which indicates clients on projects similar to this project. Provide name of project, construction dates, name of client contact, position and contact number.

B. A list of subcontractors, if any, proposed to assist the general contractor. This list shall also include the subcontractors' qualifications pertinent to this project.

C. Submit the Bid Breakdown Form included in this RFB. Reimbursable expenses must be included. No additional fees will be considered for reimbursable expenses.

D. A chart scheduling activities and proposed timetable for the activities including completion dates. The chart should be outlined by number of days to complete each task.

The selected contractor will be required to submit Proof of Insurance per the City's requirements contained in the Agreement, and a statement of liability for the accuracy, validity and reliability of services, including insurance coverage.

SECTION IV. CONTRACTOR SELECTION GUIDELINES

The review committee may include staff from CityTV, the Public Works Department and other City departments. Factors to be considered in reviewing bids may include but are not limited to:

1. General accomplishments and quality of work previously performed.
2. Previous history of work with similar projects.
3. Record of the contractor in accomplishing work within required time and budget constraints.
4. Understanding of the approach, tasks, and methodology necessary to complete the required services.
5. Geographical location of the project team.
6. References.
7. Costs included on the Bid Breakdown Form.
8. Costs/deductions included on the Add Alternate Form.

SECTION V. SOLE AUTHORITY

The City of Santa Monica has the sole authority to select the contractor, and reserves the right to reject any and all bids. By submitting a response to this RFB, prospective contractors waive the right to protest or seek legal remedies whatsoever regarding any aspect of this RFP. In addition, the City reserves the right to issue written notice to all participants of any changes in the bid submission schedule or submission requirements, should the City determine in sole and absolute discretion that such changes are necessary. The City also reserves the right to approve all individuals and firms, if any, to be retained by the prime contractor. The City's policy is to screen contractors based upon their bid and project reference checks.

SECTION VI. DEADLINE, QUESTIONS, AND OPTIONAL SITE TOUR

A. Deadline

In order to be considered, three (3) hard copies of the bid must be submitted ***by 3:00 pm PST, Thursday, October 14, 2010 to:***

Office of the City Clerk
City Hall
1685 Main Street, Room 102
Santa Monica, CA 90401

Electronic copies of the bid will not be accepted.

B. Questions

Questions must be in writing and should be emailed to Karen Domerchie-Levine at karen.domerchie@smgov.net. The last day to submit questions is by ***5:00 pm on Friday, October 1, 2010.***

C. Site Tour

A site walk will be conducted on **Wednesday, September 29, 2010** at **10:00 AM**. Participation in this tour is not required, but is highly recommended, and is only to inform those bidders who wish to view the building so as to aid them in preparing an accurate cost bid. Interested parties should meet at 10:00am at 1654-19th Street in Santa Monica. Limited street parking is available on 19th Street, and metered street parking is available on Olympic Boulevard.

SECTION VII. EXHIBITS

Refer to following pages for exhibits.

EXHIBIT A - Report of Percolation Testing prepared by GeoDesign, Inc. (07/13/09)

EXHIBIT B - As-Builts for 1654-19th Street, Santa Monica California:

1) **Sheet 1, Floor Plan, Exterior Elevations & Building Section prepared by Birba Group (11/15/90)**
2) **Sheet 2, Roof Plan, Toilets and Details prepared by Birba Group**
3) **Sheet 3, Details prepared by Birba Group**

Attention: Ms. Karen Domerchie

Report of Percolation Testing
Proposed City TV Tenant Improvement Project
1654 19th Street
Santa Monica, California
GeoDesign Project: SMonica-6-01

INTRODUCTION

GeoDesign, Inc. is pleased to submit this report presenting the results of percolation testing for the proposed City TV Tenant Improvement Project located at 1654 19th Street in Santa Monica, California. The proposed project will consist of the conversion of the existing building located at 1654 19th Street in Santa Monica, California, for use as a television station and studio.

As part of the proposed renovation, a dry well system is planned at the east side (front) of the site, within the existing planter area, and a shallow trench infiltration system is planned at the west side (back) of the site.

The percolation testing was performed to provide design data for the proposed dry well and trench infiltration systems.

The location of the site relative to surrounding features is shown on Figure 1.

SCOPE OF SERVICES

Our completed scope of services is summarized as follows:

- Coordinated and managed the field investigation, including site access authorization and scheduling of drilling subcontractor and GeoDesign field staff.
- Drilled two borings to depths of approximately 40 and 50 feet below ground surface (BGS) using hollow-stem auger drilling equipment.
- Performed standard penetration tests in the borings at approximately 5-foot intervals.
- Obtained bulk samples from the borings, and maintained a log of the soil conditions encountered in each boring.
- Performed percolation testing in the borings at depths of approximately 20 and 35 feet BGS.
- Performed analysis of percolation test results.
- Prepared this report summarizing the results of our percolation testing.

SITE CONDITIONS

The site is bound on the east by 19th Street, on the west by an alley, and on the north and south by private property. The property to the north is occupied by a one-story, high-bay, brick building. The property to the south is occupied by one-story, single-family residence. The majority of this residential lot, immediately adjacent to the site, is vacant with no existing improvements.

On-site parking is on the front (east) side of the building and is accessed from 19th Street. The parking area is paved with concrete and is approximately 44 feet long by 50 feet wide. At-grade planters are located at the northeast and southeast corners of the entranceway, adjacent to the property boundary. Access to the rear (west) side of the existing building is from an alley (18th Court). There is one parking bay at the northwest corner of the building accessed from 18th Court.

The existing site conditions, including the limits of the existing building, planter areas, and adjacent streets, are shown on Figure 2.

GEOLOGIC CONDITONS

GENERAL

The site is located on the Sawtelle Plain, a younger Holocene-age alluvial apron originating from the Santa Monica Mountains to the north (California Division of Mines and Geology [CDMG], 1998 and California Department of Water Resources, 1961). In the area, the young sediments consist of predominantly fine-grained materials such as clay, silt, and fine sand and are generally less than 25 feet thick. These younger materials are underlain by older Pleistocene sediments that generally consist of alternating beds of dense to very dense sand and stiff silt and clay with abundant gravel present in most layers.

GROUNDWATER

Based on maps published by the California Geological Survey (formerly known as CDMG, 1998), the historic high groundwater level in the site vicinity is greater than 40 feet BGS.

Based on available water level information from Los Angeles County Department of Public Works, the nearest groundwater monitoring well is Well No. 2357, located approximately 3,000 feet east of the site. The available data for this well indicate that the depth to groundwater has fluctuated between 116 and 157 feet BGS during the 1971 to 1996 monitoring period. More recent data was not available.

FAULTS

The closest active fault to the site is the Santa Monica Fault, located approximately 1,600 feet north of the site (City of Santa Monica, 2001). The fault is known to act as a groundwater barrier in the area. Groundwater levels are generally higher on the north side of the fault relative to the south side. The site is located on the south side of the Santa Monica Fault.

FIELD INVESTIGATION

We drilled two borings using 8-inch, hollow-stem auger drilling equipment to depths of approximately 40 to 49.3 feet BGS at the site. Boring B-1 was drilled in the front (east side) of the existing building, within the existing planter, to a depth of 49.3 feet BGS. Boring B-2 was drilled at the rear of the building, within the parking stall at the northwest corner of the existing building, to a depth of 40 feet BGS. Upon completion of each boring, the holes were backfilled to the desired depth of the percolation test. The boring locations are shown on Figure 2.

SUBSURFACE CONDITIONS

The geologic materials encountered in our borings consist of alternating layers of relatively impermeable clay and silt and relatively high permeability, gravelly, silt and sand.

The upper 12 to 12.5 feet of materials consist of low permeability, medium stiff to very stiff clay and silt. Below the clay and silt, a layer of gravelly silt and sand with gravel was encountered to depths of approximately 19 to 20.5 feet BGS. The sand and gravelly silt is in turn underlain by alternating layers of less permeable silt and clay.

At a depth of 25.0 feet BGS in boring B-1 and 26.0 feet in boring B-2, the materials encountered consist of highly permeable, dense, fine sand to the maximum depth explored.

The following table provides a summary of the geologic materials at the site.

Table 1. Summary of Geologic Materials

Geologic Material	Boring (depth encountered, feet BGS)	
	B-1	B-2
Silt and Clay	0 - 12	0 - 12.5
Gravelly Silt/Sand with Gravel	12 - 19	12.5 - 20.5
Silt and Clay	19 - 25	20.5 - 26
Fine Sand	25 - 49.3	26 - 40

Groundwater was not encountered in our borings drilled to a maximum depth of 49.3 feet BGS.

After completion of drilling, the borings were backfilled with soil cuttings through the augers to prevent caving to a depth of 36.0 feet BGS in boring B-1 and 21.0 feet BGS in boring B-2. Twelve inches of bentonite chips were placed over the soil backfill and a 2-inch-diameter, screened pipe was set in each hole. The upper 10 feet of the pipe was solid to prevent infiltration in the upper silt/clay materials. The augers were then removed and the hole was backfilled with gravel to the ground surface to prevent caving of the native, granular material.

The log of the borings, summarizing the materials encountered and the well construction detail, is included in Attachment A as Figures A-1 and A-2.

PERCOLATION TESTING

Percolation tests were performed using the falling-head test method. This method includes filling the polyvinyl chloride (PVC) casing with water and recording the water level drop over regular time intervals.

Prior to performing the actual percolation testing, "pre-soaking" is performed. Pre-soaking consists of filling the PVC casing with water to the ground surface and allowing the water to infiltrate into the soils. Testing is usually performed the day after the pre-soaking. However, if the water added to the hole infiltrates faster than half the initial wetted depth in 30 minutes in four consecutive readings, then testing can be performed the same day.

The depth of the testing in boring B-1 was set at a maximum depth of 35 feet BGS and was intended to evaluate the permeability of the deep fine sand layer. The screened interval was 10 to 35 feet BGS. The depth of the testing in boring B-2 was set at a maximum depth of 20 feet BGS and was intended to evaluate the permeability of the shallow gravelly silt layer. The screened interval was set at 10 to 20 feet BGS.

After completion of the percolation tests, the PVC pipes were removed and the holes were backfilled with native soil to the ground surface.

TESTING METHODOLOGY

Boring B-1

Water was added to the casing in boring B-1 for over one hour. During the hour of attempted pre-soak, the water dissipated into the fine sand strata at the bottom of the casing as quickly as water was introduced. We estimate that over 500 gallons of water was discharged into the hole during that time.

The test was abandoned as it was not possible to make the necessary measurements because the water infiltrated so rapidly. To provide information for design, however, we will provide an estimate of the infiltration rate based on assumed data.

Boring B-2

To start the pre-soak, the hole was filled with clear water to the ground surface and water level readings were taken at time intervals of every 30 minutes. The water level was refilled to the ground surface after each reading. In each of four consecutive readings, the water seeped faster than half the initial wetted depth of 20 feet BGS. As a result of this condition, testing was initiated after the fourth reading (two hours).

We measured and recorded the drop in water level every 10 minutes for a minimum of 60 minutes, refilling the hole to the surface with clear water between each reading. After 60 minutes of consistent readings, defined as having less than 10 percent variance, the water level was allowed to drop to a depth of 11 feet BGS, which is the estimated shallowest design infiltration depth; two additional readings were taken at 10-minute intervals. The water was refilled to a depth of 11 feet BGS between readings.

TEST RESULTS

Table 2 summarizes the result of our percolation tests. Our calculations are presented in Attachment B.

Table 2. Summary of Test Results

Test Location	Test Depth (feet BGS)	Soil Type	mpi		in/hr	
			Average	Lowest value	Average	Lowest value
B-1	10 - 35	SP (fine sand)	5.04*	5.05*	11.92*	11.88*
B-2	10 - 20	ML (gravelly silt)	8.36	9.99	7.23	6.01

* estimated rates
mpi: minutes per inch
in/hr: inches per hour

CONCLUSIONS

Based on the site conditions and the results of our percolation testing, the proposed dry well and trench systems are feasible for stormwater infiltration at the site.

The systems can be designed to discharge water into either the upper gravelly silt strata present at the site between depths of approximately 12 and 20 feet BGS or the fine sand layer present below depths of 25.0 to 26.0 feet BGS using the percolation rates presented in Table 2.

A percolation rate between the average and the most conservative rate is typically selected for use when designing dry well systems, retention basins, or sewage disposal systems. In this case, the average percolation rate is 7.23 in/hr and the most conservative value is 6.01 in/hr.

It should be noted that the percolation rates calculated during our field investigation are based on rates determined during short duration field tests and could vary from actual long-term rates. Also the percolation tests were clear-water tests and infiltration rates could be affected by silt build-up, debris, or other factors that occur at the site in the future.

Principal Designer. The proposed building will be in substantial compliance with the California Building Energy Efficiency Standards provided it is built according to the plans and specifications and provided future improvements are completed according to the requirements indicated on this Certificate of Compliance. The plans and specifications have been prepared to include all significant energy conservation features required for compliance with the Standards. Building areas that are unconditioned and/or not subject to the standards are indicated on the plans.

Owner. The energy conservation features and performance specifications indicated on this document and on the plans and specifications shall apply to future alterations unless compliance is demonstrated, anew and a new Certificate of Compliance is submitted. A copy of this Certificate will be retained and transmitted to future owners, subsequent owners or others with responsibility for making improvements or modifications to the building. If this certificate is lost, a new Certificate may be required before a permit is issued for alterations. Unconditioned areas are indicated on the plans and if these areas are conditioned in the future, they must be made to comply with the applicable energy standards then in effect.

Enforcement Agency. The proposed building, and future alterations will comply with the California Building Energy Efficiency Standards, provided future alterations meet the requirements indicated on this Certificate and all applicable mandatory measures, as long as the building occupancy type remains unchanged.

Energy Analyst. The energy performance analysis summarized below was performed using an approved CEC calculation method, with CEC approved fixed and restricted engineering inputs for the applicable climate zone and occupancy type, and using an appropriate representation of building zoning and physical configuration. All significant energy conservation features are listed below or on an attached supplement.

IRRIGATION NOTES

DO NOT WILLFULLY INSTALL THE SYSTEM AS DESIGNED, WHEN IT IS OBVIOUS THAT OBSTRUCTIONS OR GRADE DIFFERENCES EXIST THAT WERE NOT KNOWN DURING DESIGNING. SUCH CONDITIONS SHALL BE BROUGHT TO THE ATTENTION OF THE OWNERS AUTHORIZED REPRESENTATIVE, OTHERWISE, THE IRRIGATION CONTRACTOR MUST ASSUME FULL RESPONSIBILITY FOR ANY REVISIONS NECESSARY.

THIS DESIGN IS DIAGRAMATIC, EQUIPMENT SHOWN IN PAVED AREAS IS FOR CLARIFICATION ONLY, AND IS TO BE INSTALLED IN PLANTING AREA WHEREVER POSSIBLE.

UNLESS OTHERWISE NOTED, 120 VOLT ELECTRICAL POWER FOR CONTROLLER(S) TO BE PROVIDED BY OTHER, THE IRRIGATION CONTRACTOR WILL MAKE FINAL ELECTRICAL CONNECTION TO AUTOMATIC CONTROLLER(S) FROM OUTLET PROVIDED BY OTHER.

ALL WIRES FROM CONTROLLER TO AUTOMATIC VALVES TO BE COPPER, DIRECT BURIAL, MIN. #14 GAUGE. INSTALL IN SAME TRENCH AS MAINLINE PIPING WHERE POSSIBLE. MIN. COVERAGE OVER WIRE TO BE 18". COMMON WIRE TO BE WHITE IN COLOR. CONTROL WIRE TO BE DIFFERENT COLOR FOR EACH CONTROLLER USED. BUNDLE AND TAPE WIRES TOGETHER MIN. 20' ON CENTER.

FINAL LOCATION FOR BACKFLOW PREVENTER(S) AND CONTROLLER(S) TO BE DETERMINED BY OWNERS AUTHORIZED REPRESENTATIVE.

INSTALL EQUIPMENT AS PER DETAILS.

PROVIDE MIN. 18" COVERAGE OVER ALL PRESSURE LINES, AND MIN. 12" COVERAGE OVER ALL NON-PRESSURE LINES. ALL PIPING UNDER PAVING TO BE MIN. SCHEDULE 40 P.V.C. AND TO HAVE MIN. 24" COVER OVER PIPING.

IRRIGATION CONTRACTOR TO FLUSH ALL LINES AND ADJUST ALL HEADS FOR MAXIMUM PERFORMANCE, AND TO PREVENT EXCESSIVE OVERSPRAY ONTO WALKS, DRIVES, BUILDINGS AS MUCH AS POSSIBLE. THIS SHALL INCLUDE SELECTING THE BEST DEGREE OF ARC TO FIT ACTUAL SITE CONDITIONS.

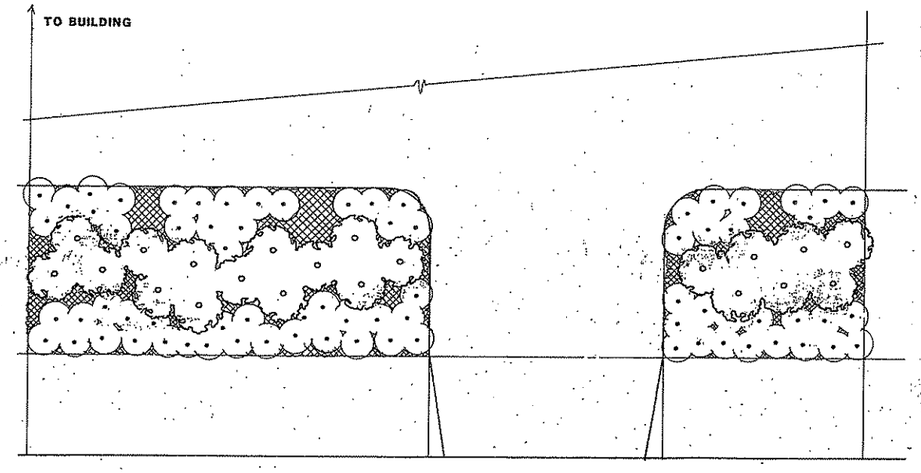
ALL SHRUBBERY HEADS ADJACENT TO PARKING LOT OR ALONG WALKS OR ROADS WILL BE INSTALLED WITH HIGH POP-UP BODIES.

IRRIGATION CONTRACTOR WILL INSTALL SWING CHECK VALVES OR SPRING LOADED CHECK VALVES AS REQUIRED TO ELIMINATE EXCESSIVE DRAINAGE FROM LOW SPRINKLERS. THIS WILL BE IN ADDITION TO ANY CHECK VALVES SHOWN ON PLAN.

ALL P.V.C. MAINLINE FITTINGS TO BE "LONG SOCKET" TYPE AS MANUFACTURED BY DURA COMPANY.

UPON COMPLETION, IRRIGATION CONTRACTOR TO SUPPLY TO OWNER, A COMPLETE SET OF REPRODUCIBLE "AS BUILT" DRAWINGS. DRAWINGS WILL SHOW LOCATION OF ALL VALVES, CROSSING, QUICK COUPLING VALVES, ETC. EACH CONTROLLER TO HAVE ITS OWN CONTROLLER CHART, CHART WILL CLEARLY SHOW EACH AREA SPRINKLED IN A DIFFERENT COLOR AND WILL BE LAMINATED BETWEEN 2 LAYERS OF 10 MIL CLEAR PLASTIC.

THE IRRIGATION SYSTEM SHALL BE FULLY GUARANTEED FOR A PERIOD OF ONE YEAR FROM DATE OF ACCEPTANCE BY OWNER. ANY DEFECTIVE MATERIALS OR POOR WORKMANSHIP SHALL BE REPLACED OR CORRECTED BY IRRIGATION CONTRACTOR AT NO COST TO THE OWNER.



19TH STREET

PLANT LEGEND *PLANT QUANTITIES ARE FOR CONTRACTORS CONVENIENCE ONLY. CONTRACTOR IS RESPONSIBLE TO VERIFY ALL PLANT COUNTS.

ALL LANDSCAPE AND IRRIGATION INSTALLATION SHALL CONFORM TO CITY OF SANTA MONICA MUNICIPAL CODES REGARDING WATER CONSERVATION.

1. AUTOMATIC CONTROLLERS WILL BE PROGRAMMED TO WATER BETWEEN 5:00pm and 10:00 am.
2. ALL LANDSCAPED AREAS SHALL BE PERMANENTLY MAINTAINED AND KEPT FREE OF WEEDS, DEBRIS AND LITTER. ALL PLANT MATERIALS SHALL BE MAINTAINED IN A HEALTHY GROWING CONDITION AND DISEASED OR DEAD PLANT MATERIALS SHALL BE REPLACED, IN KIND, PURSUANT TO THE APPROVED PLAN WITHIN 30 DAYS.
3. IF, AT THE TIME OF APPLICATION FOR CERTIFICATE OF OCCUPANCY OR FINAL BUILDERS PERMIT INSPECTION, THE REQUIRED LANDSCAPING IS NOT YET IN PLACE, THE OWNER SHALL FILE WITH THE CITY A DEFERRAL COMPLETION AGREEMENT SECURED IN A MANNER ACCEPTABLE TO THE CITY IN THE SUM OF FOUR DALLARS ($4.00) PER SQUARE FOOT OF REQUIRED LANDSCAPING NOT YET IN PLACE TO ENSURE THAT SUCH REQUIRED LANDSCAPING SHALL BE INSTALLED.

SPECIFICATIONS

1. THE CONTRACTOR SHALL ESTABLISH NECESSARY PRECAUTIONS TO PREVENT INJURY TO PROPERTY, UTILITIES, PERSONS, AND THE LIKE ON OR ABOUT THE SITE DURING THE COURSE OF HIS OPERATION.
2. THE LOCATION OF ALL UNDERGROUND SERVICES SHALL BE VERIFIED BY THE CONTRACTOR PRIOR TO THE COMMENCEMENT OF PLANTING OPERATIONS.
3. ALL WORKMANSHIP SHALL BE ACCOMPLISHED IN A MANNER SERVING THE HIGHEST STANDARDS OF THE NURSERY AND LANDSCAPE CONTRACTING TRADE.
4. NO WORK SHALL BE ACCOMPLISHED THAT DOES NOT SERVE THE BEST INTEREST OF THE OWNER.
5. ALL FURNISHED PLANTS AND TREES SHALL MEET A MINIMUM CALIF. #1 GRADE PER "GRADES AND STANDARDS FOR NURSERY STOCK", PARTS I & II, CALIFORNIA DEPARTMENT OF AGRICULTURE.
6. ALL SHADE TREES SHALL BE APPROPRIATELY GUIED AND STAKED AGAINST WIND MOVEMENT.
7. GROUND COVER PLANTING SHALL BE CONTINUOUS UNDER ALL TREE AND SHRUB MASSES AS SHOWN ON PLAN.
8. ALL PLANTING BEDS TO RECEIVE 2" DEPTH OF BARK MULCH.
9. ALL FREE STANDING TREES SHALL BE SET IN AN 8' HIGH, 4' DIAMETER MULCHED WATER RETENTION DISH.
10. ALL FURNISHED PLANT MATERIALS AND SOD SHALL BE GUARANTEED AGAINST DETERIORATION OR LOSS FOR A PERIOD OF 90 CALENDAR DAYS FROM THE DATE OF COMPLETION AND ACCEPTANCE FOR REASONS OTHER THAN THOSE BEYOND HIS CONTROL.
11. ALL GIVEN QUANTITIES SHALL BE VERIFIED BY THE CONTRACTOR PURSUANT TO SUBMISSION OF BID.
12. EXISTING AND PROPOSED SITE CONDITIONS SHALL BE VERIFIED BY THE CONTRACTOR PURSUANT TO SUBMISSION OF BID.
13. ANY AND ALL CONTINGENCIES SHALL BE BROUGHT TO THE ATTENTION OF THE GENERAL CONTRACTOR FOR RESOLUTION.
14. ADDITIONAL TERMS AND CONDITIONS SHALL BE PROVIDED FOR IN THE LANDSCAPE CONTRACT AGREEMENT.
15. SUBSTITUTIONS SHALL NOT BE ALLOWED. RECOMMENDATIONS MAY BE FORWARDED TO THE GENERAL CONTRACTOR FOR CONSIDERATION FOR REASONS OF AVAILABILITY OR SITE CONDITIONS.
16. THE GENERAL CONTRACTOR SHALL DEFINE THE LANDSCAPE CONTRACTOR'S GRADING RESPONSIBILITIES.
17. THE LANDSCAPE CONTRACTOR SHALL PROVIDE UNIT SQ.FT. COSTS FOR NECESSARY SOD PATCHING NOT SPECIFICALLY DEFINED HEREIN.
18. TWO (2) COPIES OF SOILS TESTS PERFORMED BY AN APPROVED AGRONOMIC SOILS TESTING LABORATORY SHALL BE SUBMITTED WITH PLANS. RECOMMENDED AMENDMENTS TO SOIL AS REQUIRED FOR OPTIMUM PLANT GROWTH SHALL BE INDICATED.

RE: Limited Bulk Asbestos and Lead Sampling
Former Auto Body Shop
1654 19th Street, Santa Monica, CA 90404
SCA Project No.: N-9871

Dear Ms. Domerchie:

Per your request, SCA performed a pre-renovation hazardous materials survey of a former Auto Body Shop at the above-referenced address, which is slated for conversion to a television studio. Ms. Lori Kennington, a Cal/OSHA Certified Asbestos Consultant and CDPH Lead Project Monitor, collected the bulk asbestos and lead samples on May 13, 2010.

Asbestos

The bulk asbestos samples were analyzed by EMS Laboratories in Pasadena, CA, an NVLAP-accredited laboratory, by polarized light microscopy (PLM), EPA Method 600/R-93/116.

SCA collected bulk asbestos samples of suspect Asbestos Containing Materials (ACM) that may potentially be impacted by the renovations. SCA's asbestos sampling results are presented in the table below.

Former Auto Body Shop - 1654 19th Street, Santa Monica
Asbestos Bulk Sample Analytical Results: 5/13/10

Location	Material Description	SCA Sample ID	Sample Results	Quantity of Material
Roof	**Black/gray tar-like roof penetration mastic associated with pipes and vents.**	**PENMAS-01-01, -02, -03**	**7% CH**	**10 SF**
	Black/gray built-up rolled roofing with tar/felt layer.	RFROLL-02-01, -02, -03	ND	N/A
Office Areas	Gypsum wall and ceiling board and associated joint compound.	WLSH-03-01, -02, -03, -04, -05	ND	N/A
	Non-suspect yellow carpet mastic.	CARMAS-NNN	---	N/A
Warehouse	**White putty-like door caulking associated with west Warehouse door.**	**CAULK-04-01**	**1-2% CH**	**< 1 SF**
	Black rubber door caulking at east Warehouse door threshold.	CAULK-NNN	---	N/A
Restrooms	Grout associated with ceramic wall tiles.	GROUT-05-01, -02, -03	ND	325 SF

CH denotes Chrysotile asbestos detected in sample; ND denotes sample is "non-detect" for asbestos; SF denotes "square feet"; and N/A denotes "not applicable".

Prior to any renovations affecting the ACM, the National Emission Standard for Hazardous Air Pollutants (NESHAP) mandated by the Environmental Protection Agency (EPA) and locally enforced by the South Coast Air Quality Management District (SCAQMD) require that all buildings be inspected for asbestos-containing materials, and materials subject to damage or which will be made friable, be removed.

Federal Occupational Safety and Health Administration (OSHA) regulations, locally enforced by Cal/OSHA, define ACM as substances that contain greater than 1% asbestos. Cal/OSHA also mandates special training, medical exams, personal protective equipment and record keeping for employees working with ACM.

Asbestos was identified in both the white door caulking around the west Warehouse door and black roof penetration mastic.

Lead

A total of three (3) bulk lead samples of paints and ceramic tiles were also collected by SCA within the Warehouse. These samples were analyzed for lead content in accordance with NIOSH method 7420, using flame atomic absorption. They were analyzed by EMS Laboratories, in Pasadena, CA. The HUD guideline level for lead in paints is 5,000 parts per million (ppm) of lead, and the current Consumer Products Safety Commission (CPSC) standard for lead in paints is 90 ppm.

Please note that although lead-based paints (LBP) defined against the HUD Standard, Cal/OSHA's Construction Lead Standard, 8 CCR 1532.1, applies to all paints with any measured lead content, requiring dust control measures to reduce airborne and ingestion lead dust hazards. SCA's bulk lead sampling results are presented in the table below.

Former Auto Body Shop - 1654 19th Street, Santa Monica
Lead Bulk Sample Analytical Results: 5/13/10

Location	Material Description	SCA Sample ID	Sample Results (ppm)
Warehouse	Blue interior wall paint on gypsum wallboard – intact.	Pb-BL-1	< 46
	White interior wall paint on gypsum wallboard – intact.	Pb-WH-2	< 46
Restrooms	4" x 4" white, glazed ceramic wall tiles	Pb-GLAZE-3	110

Since elemental lead is a suspect carcinogen and known teratogen and neurotoxic in high doses, lead-containing materials need to be identified prior to the on-set of renovation activities. Using combinations of engineering controls and personal protective equipment, lead-containing materials can be remediated safely. Several sources of applicable standards are listed as follows:

- Lead exposures in the workplace are regulated by Cal/OSHA, which has certain regulatory requirements for identifying and controlling potential lead exposures. Currently applicable regulations for the construction industry have been adopted by Cal/OSHA (8 CCR 1532.1) from the Federal OSHA regulations, with possibly more stringent regulations being drafted by Cal/OSHA. The current OSHA 8-hour Permissible Exposure Level (PEL) for lead is 50 $\mu g/M^3$.

- Current EPA and Cal/EPA regulations do <u>not</u> require LBP to be removed prior to renovations, unless loose and peeling. Provided that the paints are securely adhered to

the substrates (i.e., non-flaking or non-peeling), disposal of the debris may be handled in California as non-hazardous and non-RCRA waste, pending characterization of the waste.

- In California, loose and peeling LBP or other wastes exceeding the Total Threshold Level Concentration (TTLC) of 1,000 ppm (µg/g) would be required to be disposed of as non-RCRA hazardous waste. However, if the leachable lead contents of the wastes exceed the Soluble Threshold Level Concentration (STLC) of 5 mg/liter, the wastes have to be disposed of as RCRA waste.

- The major definitions of LBP or lead-coated surfaces are listed as follows:

    - HUD defines LBP as paint that contains either = 0.5% by weight of lead (5,000 parts per million), or = 1 mg/cm^2.

    - Consumer Product Safety Commission (CPSC) prohibits the manufacturing of paint that contains more than 600 ppm (0.06%) of lead. This was further reduced to 90 ppm in August 2009.

- Please note that compliance to Cal/OSHA's Construction Lead Standard is required for all paints and glazing with any measurable lead content.

- Lead is on the "Proposition 65" list, given its toxic potential in causing reproductive hazards.

- The California Department of Public Health's (CDPH) regulation 17 CCR Sections 35001 through 36100 requires all demolition, stabilization or scraping for repainting of paints or glazing defined under the HUD Guidelines as "lead-based paints" to be completed by Certified Lead Workers and Supervisors. This regulation affects all public, non-industrial buildings, including schools, offices, and housing for permanent renovations, expected to last over 20 years. Furthermore, the CDPH regulations require the use of dust controls, medical surveillance and respiratory protection, oftentimes exceeding the minimum standards outlined under Cal/OSHA's regulation 8 CCR 1532.1.

Manual demolition of lead-glazed ceramic tiles would be considered a "trigger task" under Cal/OSHA's Lead Construction Standard, 8 CCR 1532.1, requiring exposure monitoring, respiratory protection, and dust controls during demolition.

Attached are SCA's field data sheets, a sample location sketch and laboratory results. Please feel free to contact us at (310) 258-0460 if you have any questions regarding this letter.

Sincerely,
SCA ENVIRONMENTAL, INC.

Wesene Sebhat, Optical Microscopist

B.M. Kolk, Laboratory Director

BMK/mt

The EPA method is a semi-quantitative procedure. The detection limit is between 0.1 - 1% by area and is dependent upon the size of the asbestos fibers, the means of sampling and the matrix of the sampled material.

The test results reported are for the sample(s) delivered to us and may not represent the entire material from which the samples was taken. The EPA recommends three samples or more be taken from a "homogenous sampling area" before friable material is considered non-asbestos-containing.

** Negative floor tile samples may contain significant amounts (>1%) of very thin asbestos fibers which cannot be detected by PLM. Confirmation by XRD or TEM is recommended by the EPA (Federal Register Vol. 59, No. 146).

Samples were received in good condition unless otherwise noted.

B.M. Kolk, Laboratory Director

BMK/mt

The EPA method is a semi-quantitative procedure. The detection limit is between 0.1 - 1% by area and is dependent upon the size of the asbestos fibers, the means of sampling and the matrix of the sampled material.

The test results reported are for the sample(s) delivered to us and may not represent the entire material from which the samples was taken. The EPA recommends three samples or more be taken from a "homogenous sampling area" before friable material is considered non-asbestos-containing.

** Negative floor tile samples may contain significant amounts (>1%) of very thin asbestos fibers which cannot be detected by PLM. Confirmation by XRD or TEM is recommended by the EPA (Federal Register Vol. 59, No. 146).

Samples were received in good condition unless otherwise noted.

CSM

REPORT NO: 137721

DATE OF SAMPLE COLLECTION: May 13, 2010

DATE RECEIVED: May 13, 2010

DATE ANALYZED: May 17, 2010

ACCREDITATION: American Industrial Hygiene Association (101634), Environmental Lead NLLAP
California Dept. of Health Services ELAP 1119

SUBJECT: ANALYSIS OF THREE BULK SAMPLE(S) FOR LEAD

The sample(s) was/ were identified as: Pb-BL-1
Pb-WH-2
Pb-GLAZE-3

The bulk sample(s) was/ were analyzed for lead by digestion according to EPA method 3050M and analysis by EPA method 7420.

The results of the analyses and the detection limit(s) are summarized on the following page(s), accompanied by the chain of custody.

Respectfully submitted,
EMS Laboratories, Inc.

A. J. Kolk Jr.
Technical Director
AJK/mt

Method 3050 requires 1 to 2 grams of sample. The method is being used with paint chips with less than 1 gram sample and is designated 3050M.

Note: The results of the analysis are based upon the sample submitted to the laboratory. No representation is made regarding the sampling area other than that implied by the analytical results for the immediate vicinity of the samples analyzed as calculated from the data presented with those samples. All the analytical quality control data meet the requirement of the procedure unless otherwise indicated. Any deviation or exclusion from the test method is noted in this cover letter. Unless otherwise noted in this cover letter the samples were received properly packaged, clearly identified and intact.

Results have not been corrected for field blank or EMS Blank for lead samples that fall under the AIHA ELPAT program.

Dear Certified Asbestos Consultant or Technician:

Enclosed is your certification card. **To maintain your certification, please abide by the rules printed on the back of the certification card.**

Your certification is valid for a period of one year. If you wish to renew your certification, you must apply for renewal at least 60 days before the expiration date shown on your card. [8 CCR 341.15(h)(1)].

Please hold and do not send copies of your required AHERA refresher renewal certificates to our office until you apply for renewal of your certification. Certificates must be kept current if you are actively working as a CAC or CSST. The grace period is only for those who are not actively working as a CAC or CSST.

Please inform our office at the above address, fax number or actu@dir.ca.gov of any changes in your contact/mailing information within 15 days of the change.

Sincerely,

Jeff Ferrell
Senior Industrial Hygienist

NOTICE:
CITY POLICY ON DOING BUSINESS WITH ARIZONA FIRMS

CITY OF SANTA MONICA

NOTICE TO APPLICANTS, BIDDERS, PROPOSERS AND OTHER S SEEKING TO DO BUSINESS WITH THE CITY OF SANTA MONICA

The City Council of the City of Santa Monica adopted Resolution No. 10479 (CCS) on May 25, 2010, which requires a review of all current and likely future agreements and contracts with Arizona-based businesses to examine the feasibility of acquiring such products and services elsewhere while the Arizona law remains in effect.

Additionally, Council directed staff to require vendors offering goods or services to the City of Santa Monica to complete and sign the attached disclosure form; this applies to all solicitations, including but not limited to, bids and proposals. Please review, sign and submit the form with your bid packet prior to the closing date of bid.

Failure to return this form or inability to certify as to its provisions will render your bid or proposal non-responsive.
